### **DETAILED ACTION**

The following action is in response to the amendment filed for application 10/525,853 on June 19, 2007.

#### ***Allowable Subject Matter***

Claims 9-16 are allowed.

The following is an examiner's statement of reasons for allowance: the prior art of record fails to show or render obvious a transmission for a motor vehicle comprising of a transmission with an input shaft and an output shaft; a range group arranged downstream of the transmission with a range group input and output shaft; wherein when the transmission direct gear is engaged during the direct gear state, rotating elements of the transmission consist solely of a power flow path which includes only the transmission input shaft, the transmission output shaft, the range group input shaft, and the range group output shaft, including the remaining structures of claims 9, 15, and 16, respectively. Please note that the "range group" is interpreted as an auxiliary transmission and as a synonym to "area group," which is the term used in the specification. However the term "range group" is the more commonly used term in the art. Also, the direct gear flow paths through both the transmission and the range group comprise only of the shafts and the necessary claimed shifting elements. The "direct gears" are not physically gears, but a "gear ratio." Therefore none of the claimed gearing is rotating during the "direct gear."

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
